¹ Performance statistics for Diversified Select ETF portfolios are calculated from documented actual investment strategies as set by HAHN's Investment Committee and applied to its portfolios mandates, and are intended to provide an approximation of composite results for separately managed accounts. Actual performance of individual separate accounts may vary with average gross "composite" performance statistics presented here due to client-specific portfolio differences with respect to size, inflow/outflow history, and inception dates, as well as intra-day market volatilities versus daily closing prices. Performance numbers are net of total ETF expense ratios and custody fees, but before transaction costs and other investment management and advisor fees. Past investment results provide no indication of future performance. Future returns are dependent on the general investment environment, the nature of the investment mandate and specific portfolio risks. A rate of return for one year or less is not annualized.

² The Composite Benchmark is composed of the following indices: CAD 90-day Treasury Bill index, Morgan Stanley Capital International equity indices, Canada Dex Universe bonds, US Barclays Aggregate bonds, and Citi WBIG-Non USD bonds.
